SUMMARY

ISTQB-certified SDET and QA Automation Engineer with 4+ years of experience designing and scaling enterprise test automation frameworks across UI and API layers for multi-tenant SaaS platforms. Expert in Playwright with TypeScript, Selenium WebDriver with Java, Rest Assured, TestNG, and Cucumber (BDD), with deep CI/CD experience on Jenkins, GitHub Actions, and Bitbucket Pipelines. Pioneered the integration of Generative AI (Claude Opus / Sonnet / Haiku, Claude Code CLI, Anthropic API) into the QA engineering workflow — authoring custom CLAUDE.md project guides, slash commands, and specialized sub-agents that automate test scaffolding, locator authoring, test healing, and code-quality audits. Proven record of reducing manual test effort by 40–60%, improving defect-detection rates by 35%+, cutting test-authoring time by ~65% with AI assistance, and delivering zero-escape releases across multiple sprints.

CORE COMPETENCIES

- Languages:** Java | TypeScript | JavaScript (ES6+) | SQL | Node.js
- Test Automation:** Playwright | Selenium WebDriver | TestNG | JUnit | Rest Assured | Cucumber (BDD) | Postman | Page Object Model (POM) | Keyword-Driven Frameworks | Data-Driven Testing | API Automation | Cross-Browser Testing
- CI/CD & DevOps:** Jenkins | GitHub Actions | Bitbucket Pipelines | Git | GitHub | Maven
- Generative AI / AI-Augmented Engineering:** Claude (Opus 4.x / Sonnet 4.x / Haiku 4.x) | Claude Code CLI | Anthropic API, Claude Agent SDK | Prompt Engineering, AI-Assisted Test Generation | LLM-driven Test Healing | Custom Sub-Agents | CLAUDE.md Project Guides | Custom Slash Commands & Skills | Prompt Caching, Tool Use / Function Calling | Model Context Protocol (MCP) | GitHub Copilot | ChatGPT
- Reporting:** Allure | Extent Reports | JUnit XML | TestNG Reports | Lighthouse
- Databases:** PostgreSQL | SQL
- Task Management & Agile:** Jira | Confluence | Agile | Scrum | Sprint Planning | Backlog Grooming | SDLC
- Testing Types:** Functional | Regression | Smoke | Sanity | End-to-End (E2E) | UI | API | Integration
- Soft Skills:** Agile Communication | Stakeholder Collaboration | Defect Triaging | Root Cause Analysis | Test

PROFESSIONAL EXPERIENCE

SENIOR SOFTWARE TEST ENGINEER / *Qapitol QA — Bengaluru, India | Jan 2026 – Present*

- Project: LSQ NextGen UI Automation — LeadSquared CRM Platform (Playwright + TypeScript)*
- Architected a scalable E2E UI automation framework using Playwright 1.57 and TypeScript 5.8, covering 10+ business modules (Leads, Opportunities, Accounts, Activities, Smart Views, Forms, Distribution Engine, OSS, Tenant Management) for a multi-tenant CRM SaaS platform.
 - Designed a 3-layer Page Object Model — Locator Layer, Page Layer, and a centralised PageManager with lazy initialisation — improving reusability and reducing test maintenance overhead by approximately 50%.
 - Embedded Generative AI into the QA workflow by authoring a comprehensive CLAUDE.md project guide that encodes architecture, naming conventions, anti-patterns, locator strategy, and test templates — enabling Claude to generate framework-compliant code on the first attempt.
 - Built custom Claude Code slash commands (/generate-test, /review-test, /debug-test, /fix-antipatterns, /quality-check, /new-page-object, /check-registration, /validate-migrate) for one-command test-lifecycle operations.
 - Designed specialised Claude sub-agents — playwright-test-generator, playwright-test-healer, playwright-test-planner, module-health-checker, pagemanager-auditor, test-data-auditor, and regression-scope-advisor — to parallelise authoring, healing, and auditing safely across a large codebase.
 - Built API-driven test data management using Axios and Faker, reducing test setup time by ~60% and stabilizing flaky UI-only flows. Supported release cycles with smoke, regression, and functional testing while actively reporting high-impact issues.
 - Integrated the framework with CI/CD pipelines (Bitbucket Pipelines — equivalent to Jenkins / GitHub Actions), enabling parallel execution, automatic retries, and PR-triggered regression runs. Collaborated with developers and stakeholders in Agile ceremonies to ensure timely delivery of product features.
 - Collaborated with developers, product owners, and release managers in Agile/Scrum ceremonies; tracked test cases, defects, and stories in Jira.

Tech Stack: Playwright, TypeScript, JavaScript, Node.js, Claude Code, Bitbucket Pipelines, Jenkins, GitHub Actions, Allure, JUnit, SonarQube, ESLint, Prettier, Husky, Jira, Agile/Scrum.

PRODUCT ENGINEER (SDET / QA Automation) | Edgeverve Systems Limited — Bengaluru, India | Feb 2022 – Jan 2026

Project: AI Next Platform — Enterprise Automation (Java + Selenium + Rest Assured)

- Developed and maintained automated test suites in Java + Selenium WebDriver + TestNG for AI Next Platform applications, reducing production bugs by 80%.
- Led test-script implementation for client supply chain and AI platforms, improving operational efficiency by 70% and user satisfaction by 25%.
- Built robust REST API test suites using Rest Assured, cutting manual test effort by 40% and increasing defect detection by 35%.
- Integrated Selenium with Lighthouse to automate 95% of regression tests, saving the QA team 15+ hours/week.
- Maintained CI/CD automation pipelines on GitHub Actions, ensuring high-quality code across every sprint. Supported release cycles with smoke, regression, and functional testing while actively reporting high-impact issues.
- Collaborated with developers and stakeholders in Agile ceremonies — sprint planning, daily stand-ups, grooming, and retrospectives; used Jira for defect and test-case tracking.

Tech Stack: Java, Selenium WebDriver, TestNG, Rest Assured, Maven, JUnit, PostgreSQL, Lighthouse, GitHub Actions, Postman, Jira

EDUCATION

- **PCMC / Alva’s College, Karnataka** | *June 2014 – June 2016* |
- **Bachelor of Engineering in Information Science and Engineering / Visvesvaraya Technological University, Karnataka** | *August 2021* |

CERTIFICATIONS

- **ISTQB Certified Tester – Foundation Level (v4.0)**

KEY ACCOMPLISHMENTS

- Built a Playwright + TypeScript enterprise automation framework covering 10+ CRM modules and 500+ E2E test cases with Page Object Model architecture
- Automated 95% of regression test cases by integrating Selenium with Lighthouse — saving ~15 hours per QA cycle.
- Improved defect detection rate by 35% through comprehensive Rest Assured API automation.
- Maintained 100% test-script stability per sprint using a robust keyword-driven + POM hybrid automation framework.
- Delivered zero-escape releases for multiple sprints through combined smoke + regression + API validation strategy.

PROJECTS

- **LSQ NextGen UI Automation Framework** — Enterprise-grade Playwright + TypeScript E2E automation for LeadSquared CRM; 3-layer POM architecture, API-driven data management, multi-environment CI/CD integration.
- **Netflix Clone** – Frontend app replicating Netflix UI and video content browsing using ReactJS.
- **Travel Recommendation System** – Suggests destinations based on user inputs using simple ML logic.
- **Attendance System** – Web-based solution for student/employee attendance tracking and reporting using Open
